UNITED STATES DEPARTMENT OF AGRICULTURE
COMMODITY STABILIZATION SERVICE

November 1960

COTTON FACTS FOR COMMITTEEMEN

1961

The purpose of "Cotton Facts for Committeemen" is to provide the State, county, local committees and others with ready reference material which can be used to answer some of the many questions which arise in connection with the cotton acreage allotment, marketing quota, and price support programs. Following is a discussion of the programs in question-and-answer form with tables showing some of the basic statistical information used in connection with the programs.

1. Will the Choice (B) allotment program under which producers may increase their regular allotments be continued in 1961?

No. Legislation provided for Choice (A) and Choice (B) programs for 1959 and 1960 only.

2. What is the basis for the proclamation by the Secretary of Agriculture on October 13, 1960, of a national marketing quota and national acreage allotment for the 1961 crop of upland cotton and a similar proclamation for the 1961 crop of extra long staple cotton?

The Agricultural Adjustment Act of 1938, as amended, requires that the Secretary issue such proclamations, not later than October 15, 1960, if he finds that the total supply of cotton for the marketing year beginning August 1, 1960, will exceed the normal supply for such year. In the case of extra long staple cotton, the proclamation is required when the total supply exceeds the normal supply by more than 8 percent. The Act defines total supply and normal supply and their component parts and provides a formula for determining the amount of the national marketing quota and national acreage allotment. The Secretary's findings with respect to total supply, normal supply, and the amounts of the national quota and allotment are shown in Table 2 of this pamphlet for both kinds of cotton.

3. What is the procedure for placing cotton marketing quotas and acreage allotments into effect?

Using the latest available statistics of the Federal Government, the Secretary's findings and determinations with respect to total supply and normal supply were included in the proclamation. The national marketing quotas and acreage allotments for upland and extra long staple cotton were included in the proclamation and also announcement was made that

separate national referendums on the two types of cotton would be held on December 13, 1960, for the purpose of providing eligible cotton producers an opportunity to vote, by secret ballot, for or against the quotas proclaimed. At least two-thirds of those voting in the referendum must favor quotas if they are to continue in effect. The Act also provides formulas for apportionment of the national acreage allotment to the respective States, the State allotments to counties, and the county allotments to farms. State allotments for 1960 and 1961 are shown in Table 1.

4. What is the present or prospective carryover, production, imports, domestic consumption, exports and acreage of cotton, and how do the figures compare with other years?

The acreage planted to all cotton, by States, and the supply and distribution of all cotton for representative periods of years are shown in Tables 3 and 4.

5. What generally is the supply and disappearance picture for the next year or two for upland cotton?

The carryover of upland cotton was 7.3 million bales on August 1, 1960, as shown in Table 2. If exports for the 1960-61 marketing year reach 6.0 million bales and consumption is 8.4 million bales, as currently estimated, the carryover of upland cotton on August 1, 1961, would be about 7.3 million bales. In order to maintain a carryover of upland cotton on August 1, 1962, at about the same level as estimated for August 1, 1961, a tentative national marketing quota for 1961 was determined by use of the basic formula and then adjusted upward by 500,000 standard bales. Such upward adjustment was made so as to offset loss of production under the 1961 national marketing quota due to anticipated underplantings of allotment and normal abandonment of acreage planted to cotton.

6. What are the reasons for increasing, over recent years, the quota and allotment for the 1961 upland cotton crop?

The national marketing quota and acreage allotment for 1961 were increased in accordance with the new formula in the law under which the quota is established on the basis of estimated domestic consumption and exports but is subject to such upward adjustment as may be necessary to maintain adequate stocks of cotton.

7. What will the price support be for the 1961 crop?

If marketing quotas are approved in the December 13 referendum, price support will be available to growers who comply with their farm allotments at a level within the range of 70 to 90 percent of parity. The exact level of price support will be determined later. If marketing quotas are disapproved, price support will be available to growers who comply with their farm allotments at 50 percent of parity.

8. What is the purpose of the Cotton Export Program?

This program was initiated in 1956 in order to reduce the accumulated surplus of United States cotton, which was at a record high at the beginning of that marketing year, and to reestablish and maintain the fair historical share of the world market for U. S. cotton. The export sales program, whereby CCC stocks of upland cotton were offered for sale at reduced prices, for export, was discontinued July 31, 1959. Under the 1960-61 Cotton Export Program - Payment-in-Kind, exporters who register their sales or consignments of upland cotton with CCC can earn payments in the form of certificates redeemable in cotton from CCC stocks. The current rate of payment is 6 cents per pound or about \$30 per bale. Cumulative registrations since the beginning of the program on April 25, 1960, through October 14, 1960, totaled 2,708,081 bales.

9. What is the purpose of the Cotton Products Export Program?

This program was initiated in 1956 in order to equalize the price of cotton being exported in the form of cotton products with the price of raw cotton being exported under the export program. It is carried out by making equalization payments to the exporters of cotton products. The payments reflect the difference between the export price of cotton and the domestic market price of cotton on the raw cotton content of the cotton products exported. Payments to exporters during the 1957, 1958, and 1959 marketing years totaled \$15.5 million, \$13.2 million, and \$17.2 million, respectively. During the current marketing year, payments to exporters of cotton products totaled about \$4.5 million through September 30, 1960. Since the beginning of the program in 1956, payments have been made on exports to 112 foreign countries. Base rates of payment have ranged from 5.61 to 8.00 cents per pound.

10. What is the situation with respect to trends in cotton yields per acre?

The trends in yields per acre for the United States and by regions can be determined by referring to Table 5.

11. What has been the reason for the variation in the national acreage allotment available to the States since 1956?

In accordance with the provisions of law, prescribed minimum national acreage allotments have been in effect for each year since 1956. The minimum national acreage allotments for 1957 and 1958 were equal to the 1956 allotment of 17,391,304 acres as compared with 16,000,000 acres for 1959 and 1960. In addition, the minimum State allotment for each of the years 1957 and 1958 could not be less than its apportionment from the national allotment for the preceding year by more than one percent. A national

reserve of 100,000 acres for 1957 and 1958 was provided to assist in establishing minimum farm allotments as compared with a national reserve of 310,000 acres for such purpose for 1959 and 1960. For 1961 an allocation of 60,000 acres from the national acreage reserve is provided to take care of minimum farm allotments. This is in addition to the national allotment for 1961. In summary, these provisions resulted in nationally allotted acreages for the respective years as follows:

1957	17,585,463 acres
1958	17,554,528 acres
1959	17,329,515 acres *
1960	17,533,402 acres *
1961	18,458,424 acres

* Includes increases that resulted from election of Choice (B) allotments.

Table 6 shows the acreage allotted to each State for 1961 under the above provisions.

Table 7 shows the number of farms and the total acreage involved in the release and reapportionment provisions of the cotton program.

Table 1. State Acreage Allotments for Upland and Extra Long Staple Cotton for 1960 and 1961 with 1960 Acreages for Comparison

State	Upland			Extra Long Staple

1/ Running bales except imports and national quotas which are in 500-lb gross weight bales.

2/ Excludes stockpile and current crop ginnings prior to August 1.

3/ October Crop Report.

Except for certain minimum State allotments for upland cotton the national acreage allotments are apportioned to the respective States on the basis of the acreages planted to cotton in the years 1955, 1956, 1957, 1958, and 1959, with adjustments for abnormal weather conditions during such period.

1/ As provided by section 104(a) of the Agricultural Act of 1958.

NOTE: The law provides that no State shall receive an allotment for upland cotton for 1961 which is less than the smaller of 4,000 acres or the highest acreage planted to cotton in the State in any of the years 1958, 1959, and 1960. The remainder of the national acreage allotment of 18,398,424 acres (announced Oct. 13, 1960) is apportioned among other States on the basis of the acreages planted to cotton in the years 1955, 1956, 1957, 1958, and 1959, with adjustments in such acreages as required by law.

UNITED STATES

Table 7. UPLAND COTTON: Summary of Released and Reapportioned Allotment Acreage - 1959 and 1960.

State	1960						1959
